

Homira · Legal informationCookies and storage

Last updated: 10 October 2026. Applies to the homira.app information website.

What this website uses

Homira does not include advertising cookies or audience measurement tools on this website. This notice explains a display preference. You can select “Close notice” without saving anything. We save the preference only if you tick “Do not show this notice for 180 days on this browser”. Closing the notice does not accept terms of use or authorise advertising or other processing.

The controller is Multiservihogar Soluciones S.L. See its details and data protection information in the privacy policy, or write to info@homira.app.

What is stored in your browser

Name and type	Purpose	Retention
homira_cookie_notice_v2	First-party local storage (localStorage)	Remembers your explicit choice not to show this notice for 180 days. The checkbox is initially unchecked. Contains the notice version and date; it has no advertising identifier and is not sent to the server. Valid for 180 days. On your next visit after expiry, the expired record is removed and the notice reappears. You can also delete it in your browser, or reopen the notice, untick the checkbox and select “Close notice”. If your browser blocks storage, you can still dismiss the notice, although it may reappear on another page.

Hosting and external links

The public website is served through Cloudflare. Hosting may process technical information needed to deliver and protect the pages. See the Cloudflare privacy policy. Provider security mechanisms must be limited to necessary delivery and protection purposes; they do not enable advertising or audience tracking.

Homira registration forms are covered by our privacy policy. CRM authentication and preference storage is described below. External websites have their own policies. Closing this notice is not consent for those services. External font requests may communicate technical information to the provider; this is not in itself an advertising cookie.

How to reopen the notice

Use “Cookies and storage” in the footer of any page. You can remove homira.app storage through your browser’s privacy settings. If we add non-essential cookies in the future, we will update this information and provide acceptance and rejection controls before activating them.

Reopen the notice

CRM session

The CRM uses the first-party `__Host-homira-session` cookie to authenticate you and keep access private. Without Remember me, the session lasts up to one hour; with it, up to thirty days, unless you sign out or access is withdrawn. Remembered access is an option on the login form that you can untick. This storage is used for the requested access, not advertising.

The first-party sidebar_state cookie remembers the menu display preference for seven days. You can delete it in your browser or sign out; you will need to verify your email again. See CRM privacy information.
